case study

i2B Consulting

TFL i2B Consulting, alongside Transport for London business experts and SAP Partner AXON have successfully implemented SAP throughout TFL, widely believed to be the largest SAP implementation in Europe at the time.

Using i2B expertise in SAP data structures, integration / migration and project management techniques TFL successfully went live with up to four thousand users across finance, procurement and HR.

Boots i2B Consulting took on a project to help Boots undertake their biggest IT project ever and the biggest SAP Retail rollout to date in the world.

Replacing a multitude of legacy systems i2B worked alongside Boots SAP partners and business experts to ensure as smooth a migration and implementation as possible to SAP.

Boots tightly integrated SAP with existing applications such as its forecasting and replenishment engine and its tactical software for planning the location of goods in-store. Over time, the company will migrate its supply chain to SAP and use it for merchandising and supplier master data.

"The integration benefit is the largest aspect," says Andrew Hey, (Head of Application Infrastructure at Boots) "There is also a positive return on investment in this project, which was the main vehicle for getting the board behind it."

Barnardos i2B assisted Barnardos to upgrade to Oracle 11i. Barnardos helps the most vulnerable children and young people transform their lives and fulfil their potential.
